

Identifying the Core Problem (User Pain Point)

The core challenge for BlaBlaCar users, both drivers and passengers, is the inability to easily and privately share precise real-time location details or address immediate needs that arise during a trip, all while keeping their personal phone numbers secure.

- **Vague Meeting Points:** Pinpointing exact pick-up/drop-off spots can be ~~difficult~~, especially in bustling areas.
- **Urgent Needs:** Lack of instant communication for real-time updates like traffic delays or quick route questions.
- **Slow Chat:** Current in-app messaging isn't effective for ~~time-sensitive~~ coordination.
- **Privacy Risk:** Users are hesitant to share personal contact details with strangers.
- **User Impact:** This leads to stress, wasted time, and a less smooth overall journey.

Jobs To Be Done

Circumstance: "When arranging or during a shared ride through BlaBlaCar..."

- Motivation (Core Need): "...my core need is to have a direct, private channel without sharing my number and promptly communicate with my driver or passenger for exact location details or last-minute trip adjustments..."

Desired Outcome: "...so I can avoid confusion, eliminate waiting around, and feel fully safe and informed, contributing to a truly smooth and anxiety-free travel experience."

DRIVER PERSONA

USER DESCRIPTION:

Rahul is a 32-year-old software engineer who frequently drives between Lucknow and Delhi. He uses BlaBlaCar to offset fuel costs and enjoys the company. He values efficiency, punctuality, and a smooth journey. While tech-savvy, he's frustrated by communication hurdles that delay his trips and is highly protective of his personal privacy.

BEHAVIORS AND PREFERENCES:

Rahul often offers seats on his long-distance commutes. He prefers clear, direct coordination for pick-ups to avoid waiting. He uses navigation apps and is generally efficient. His preference for communication is direct, but he strongly dislikes sharing his private phone number with unfamiliar passengers, leading to awkward moments when immediate contact is needed for coordination.

NAME:	Rahul
AGE:	32 years old
OCCUPATION:	Software Developer
LOCATION:	Lucknow/Delhi

Pain Points

- Privacy Risk
- Unclear Meeting Points
- Urgent Questions
- Lack Of Updates

MOTIVATIONS:

- Affordability: (High)
- Convenience: (High)
- Safety: (High)
- Privacy: (High)

Goals and Needs

- Personal Safety & Privacy
- Clear Coordination
- Quick Clarifications
- Peace of Mind

PASSENGER PERSONA

USER DESCRIPTION:

Priya is a 25-year-old university student who frequently travels between Lucknow and Delhi for academic purposes. She depends on BlaBlaCar for budget-friendly and convenient transport. She seeks clear instructions and smooth coordination for her journeys, valuing her safety and personal privacy highly when traveling with new people. She is often stressed by uncertainties during pick-up.

BEHAVIORS AND PREFERENCES:

Priya actively searches for rides that fit her schedule and budget, prioritizing convenience and affordability. She prefers clear, unambiguous instructions for pick-up and drop-off points, as she wants to avoid confusion or waiting around. She is cautious about sharing personal information and her phone number with strangers. She needs a quick, discreet way to confirm details or ask about specific drop-off points without feeling intrusive or unsafe.

CUSTOMER JOURNEY: THE "LAST MILE" COMMUNICATION GAP

Evidence that the Problem is REAL

Minimum Viable Product: MVP

Our Minimum viable product shows that we have integrated an option to call either party through BlaBlaCar without sharing our personal contact info.

In our next phase we will integrate an option to share location for a hassle-free pick-up or drop-off

Our MVP: Core Value First, Prioritized with MoSCoW

MUST-HAVE	SHOULD-HAVE
• An option to call either party for the ride offered. • An in-built option to share your pick-up and drop-off location.	• Before customer onboarding, there should be an option to fulfill the KYC (Know your customer) requirements for better safety
COULD-HAVE	WON'T-HAVE
• An option to edit the number of passengers who want to book the ride for an SUV Vehicle (7 seater) as their is only an option to accomodate upto 5 passengers only.	• No option of sharing personal contact info through BlaBlaCar app as moderation by the app itself is an evidence of the safety of either party.

Our Product Roadmap: Evolving Communication

NOW: No option to call or send location to either party

NEXT: An option to integrate the calling feature to be added for as a privacy measure

LATER: An option to send pick up or drop off location from either party to be integrated later
